

Image inpainting

1. Upload an image by clicking on the first canvas.
2. Click on the subject you would like to keep. Immediately SAM will be run and you will see the results. If you are happy with those results move to the next step, otherwise add more points to refine your mask.
3. Write a prompt (and optionally a negative prompt) for what you want to generate for the infilling. Adjust the CFG scale and the seed if needed. You can also invert the mask, i.e., infill the subject instead of the background by toggling the relative checkmark.
4. Click on "run inpaint" and wait for up to two minutes. If you are not happy with the result, change your prompts and/or the settings (CFG scale, random seed) and click "run inpaint" again.

EXAMPLES

Scroll down to see a few examples. Click on an example and the image and the prompts will be filled for you. Note however that you still need to do step 2 and 4.

Input

SAM result

Output

background subject

Classifier-Free
Guidance Scale 7 Random seed
74294536 Infill subject instead of
background

Prompt for infill

baby as birthday girl

Negative prompt

Reset

Run inpaint

≡ Examples

Input	Prompt for infill	Negative prompt	Random s
	a car driving on planet Mars. Studio lights, 1970s	artifacts, low quality, distortion	7429453
	a dragon in a medieval village	artifacts, low quality, distortion	97
	a fantasy landscape with flying dragons	artifacts, low quality, distortion	97
